- Audio codecs includes AAC, MP2, MP3, Flac
- Supports Dante audio technology for near-zero latency and seamless synchronisations

Integrated Controls on a Single Dashboard

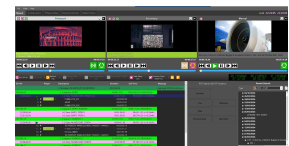

Etere Nunzio ETX Playout delivers an integrated control for all your newsroom playout streams on a single screen. The dashboard displays important information such as the duration of each clip, the status of each clip, description of each segment, story and clip in real-time. When the software starts, it automatically displays all the rundown that are approved. In addition, it loads the files in priority according to the status in the system. For example, On-Air clips are automatically loaded first followed by the next-in-line and cued clips.

Etere Nunzio ETX Playout can also control the MOS graphics, a single operator can control all the playout with a single Mouse click.

Deliver Relevant and Compelling Content with Real-time Updates

Etere Nunzio ETX Playout is designed to manage large, diverse sets of information with dynamic changes. It features a distributed system architecture that enables a reliable and fault-resilient performance. Whenever there are changes in the rundown, Etere Nunzio ETX Playout automatically updates the information to reflect its real-time status. Similarly, when Etere Nunzio ETX Playout triggers a change in the status of the rundown, the change is instantly communicated across the newsroom system. Suitable for news organizations of any size, Etere Nunzio ETX Playout is the complete solution you need to effectively deliver compelling, quality and relevant content to your audiences.

Etere Ecosystem Integration

Etere Nunzio ETX Payout is also integrative with Etere Media Asset Management and Etere T-Workflow to facilitate a seamless workflow from the planning of news stories to payout. Etere's integrative framework ensures information is delivered quickly and accurately across departments. Sharing a centralized database across the end-to-end Etere Ecosystem, Etere elevates your workflow capabilities to manage dynamic newsroom requirements and multi-site systems more efficiently, even for a 24/7 content delivery.
