NewTek NDI

Etere announced that its video logging software, **Etere Memory** includes support for IP input with NewTek Network Device Interface (NDI®). Besides TS, AIMS and ASPEN, users can also leverage on the benefits of NDI. With the upgrade, users are able to receive NDI over SDI streams as well as Real-time Transport Protocol (RTP), Real-Time Messaging Protocol (RTMP) and User Datagram Protocol (UDP) streams. Additionally, Etere Memory supports the H264 format (MPEG-4) for its use in high definition systems such as HDTV, Blu-ray and HD-DVD. It also comes equipped with Etere player for Windows as well as the streaming of content for the remote control of video.

Etere Memory is an automatic video logging software solution that also serves as a media logger that is capable of recording and storing all transmitted content in a low resolution format. It enables operators to record and view clips at the same time with only a few seconds delay. Users also have the option to perform HTTP, UDP, RTSP and RTMP streaming to flash media or the Wowza Media Systems. Etere Memory supports all commonly used input cards including Blackmagic and Matrox.

NDI is royalty free for any company looking to establish IP workflows within their organization, or in commercial products and applications they deliver. Boosting a seamless integration, NDI enables multiple video systems to identify and communicate with one another over IP as well as to encode, transmit and receive multiple streams of high quality, low latency and frame-accurate video and audio in real-time. Etere has supported NDI since 2014, when its software-based channel-in-a-box, Etere ETX was integrated with support for NDI.
