

Optimised for small broadcasters, the Etere Master Control Limited produces crisp, timely feeds that can dazzle your audience. Created for the purpose of delivering main and clean feeds, users can now optimise their time and cost with this new, software only program.

The ETX Master Control Limited offers users a vibrant and time sensitive main feed and clean feed, ensuring that viewers see only the best. Equipped with full system controls, all components of your control room can be accessed through the ETX Master Control Limited.

Created to cater to broadcasters that do not require a full broadcast play, the ETX Master Control Limited is able to only provide a main feed and a clean feed, unlike the full Master Control, that is also able to incorporate graphics. This revamped structure ensures that broadcasters pay for only what they will use, thus saving on expenses.

Equipped with an unbeatable quality, ETX Master Control Limited is able to deliver a superb picture quality due to its software only design, a reduced amount of broadcast devices and a native digital signal processing. The processing of the ETX Master Control Limited vs the processing of the ETX Master Control can be seen in the diagrams on the left.

Etere Master Control Limited provides all features required from a master control including:

- ☐ Touch-screen graphic interface
- ☐ Customised transition effects settings
- ☐ Preset and preview bars for fast switching
- ☐ Default configuration (A/B) needs a SD/HD 2IN-2OUT card
- ☐ Unlimited number of input channels
- ☐ Audio shuffling and control as well as dolby-e pass-through
- ☐ Video switching including transitions effects
- ☐ Multiple PC's installations (e.g. for a 2nd EE monitor)
